

lua

the smart planter with feelings

- Do you enjoy taking care of your plants?
- Do you like them?
- Have you ever regretted not being able to communicate more thoroughly with them?

Then look no further!

The smart planter Lua uses a variety of sensors to trigger as much as 15 different universal animated emotions depending on the state and well-being of your prized vegetal companion!

Lua checks everything from soil's moisture to light exposure and temperature to ensure your houseplant is as comfy as you want it to be.

It then turns the results into easy-to-understand faces using its 2.4in LCD IPS screen.

Skip the hassle of an intricate setup: Lua is entirely controlled offline using its free mobile app. Just choose your plant's family or exact type from a list, make Lua read the generated QR code, and you're good to go! Or you can even manually set up your own preferred thresholds for the sensors!

Last but not least, Lua also includes a motion sensor that allows its eyes to follow the movements in front of them: it's like Lua's looking at you!

Give a spark of life to your plants
and evolve them into full-fledged pets with **lua**
